

"What is Magic?"

Lecture and practice

Awakening Discussions by Natalia Remmy

As children, we were fascinated by stories about fairies, elves, magic wands, and flying carpets. We lived in this dream world where anything was possible through magic.

As we grew older, we turned away from these stories in favor of technological advances. We feel that these stories are nothing but harmless tales for children, to teach them a moral lesson or to simply entertain their imaginations until they are old enough to "know better."

Roman tells that this is wrong thinking. Magic exists in our present lives and has always existed. Magic is a birthright given to each and every one of us for the betterment of our lives. In this introductory lecture, he will reintroduce you into this fascinating world around us that has always existed. Among other things, you will learn a little history, the main types of magic, how and why it ALWAYS works, basics of ritual, and PRACTICAL APPLICATIONS so you can live a fuller and more meaningful magical life!

The lecturer: **Roman Dyschkant**, who has been a student of esoteric studies his entire life. He has taught courses in Eastern Ethics and Philosophy, Women's Self-defense, and has lectured on topics like Parapsychology and Kabbalah at different colleges in Illinois. He is a trained concert pianist and music director. Currently he works as a dentist in Downtown Chicago but maintains an interest in many varied subjects. Roman is also married to a dentist and they have 3 beautiful children.
